Geneva, NY 14456

Introduction

- Trials using shrub willow as a bioenergy crop started in the 1970's
- Studies have included potential yields of different willow cultivars
 - across a range of environments
 - nutrient amendments and cycling
 - alternative tillage practices
 - cover crops
 - harvesting systems
 - spacing and planting density studies.
- Current planting designs based on the double row system

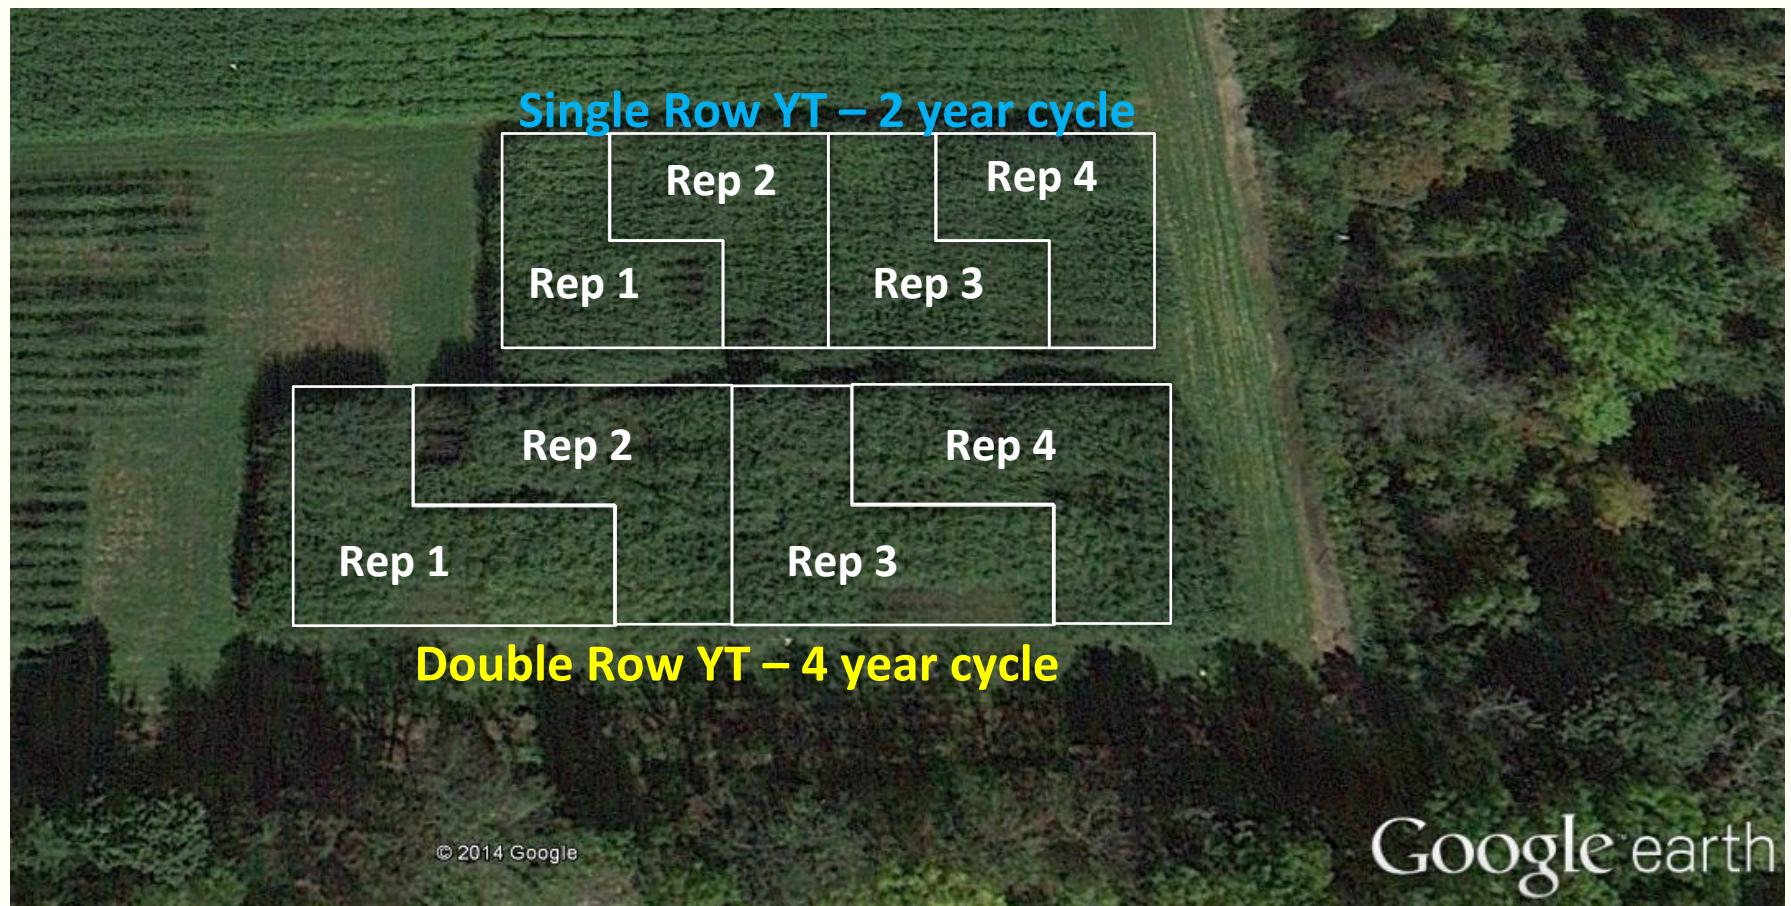

Objectives

- Report on the performance on the breeding and selection of novel species hybrids
- Evaluate growth in single row vs. double row spacing design
- Evaluate the effects of rotation length on biomass production
- Describe variation in stem diameter, stem height, density, composition, and yield

Loomis Farm – Geneva, NY

RCBD, 10 clones per block, 4 blocks per trial

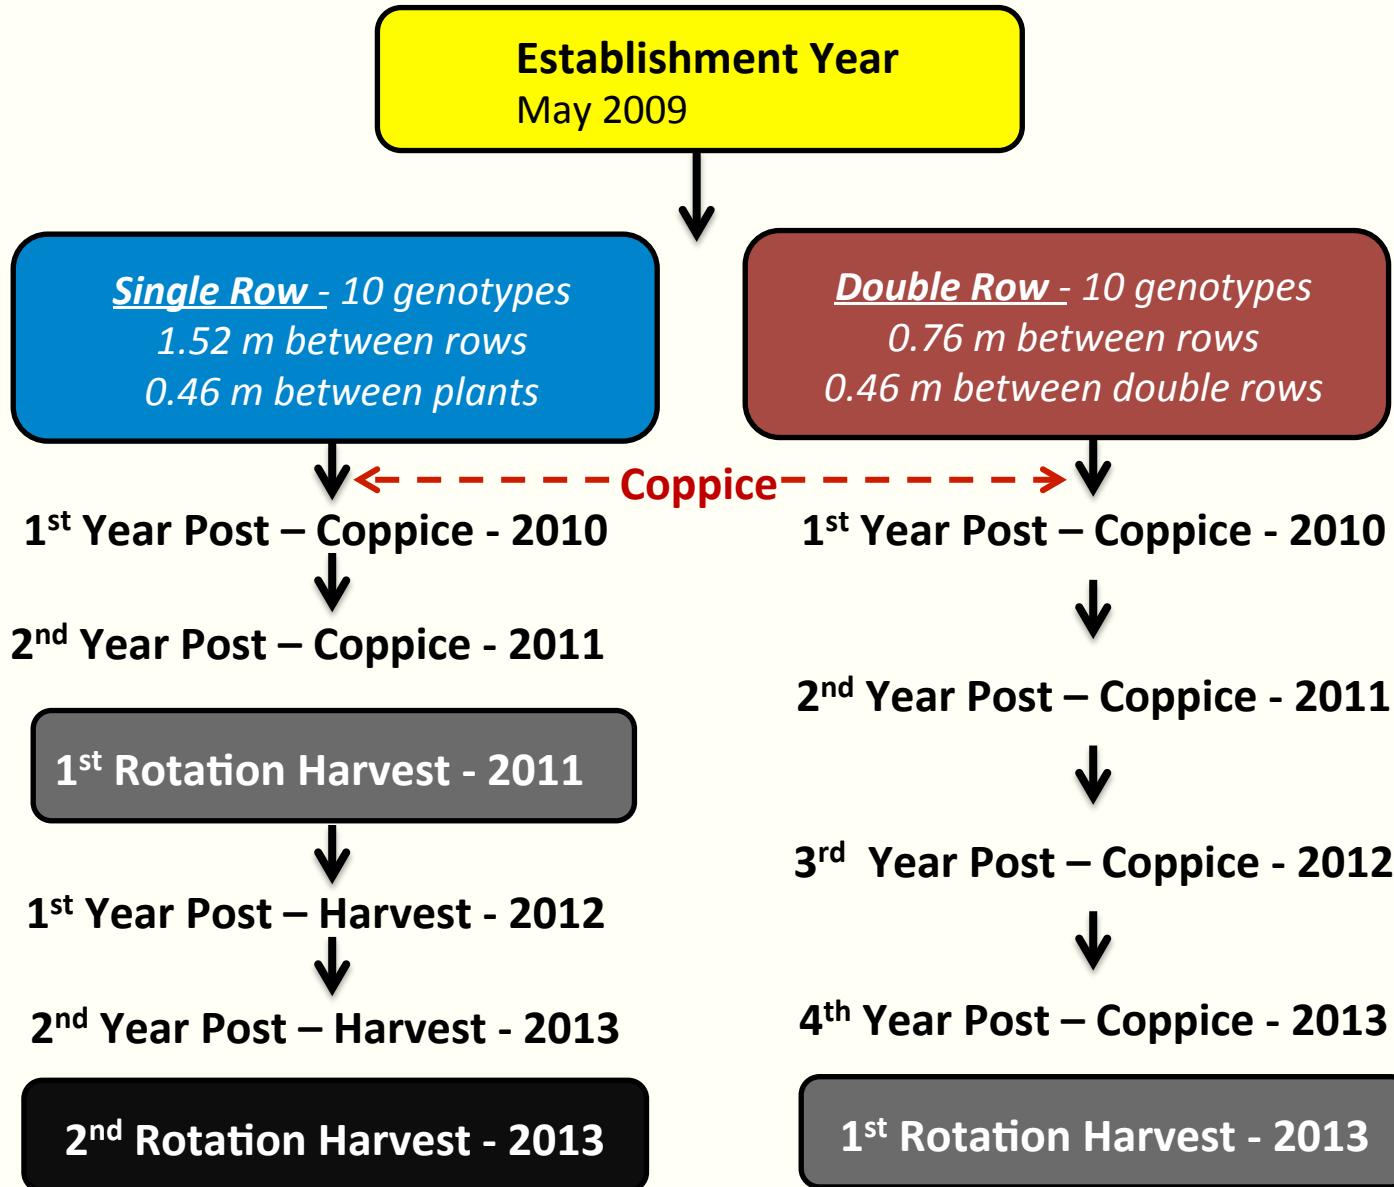

Site Characteristics

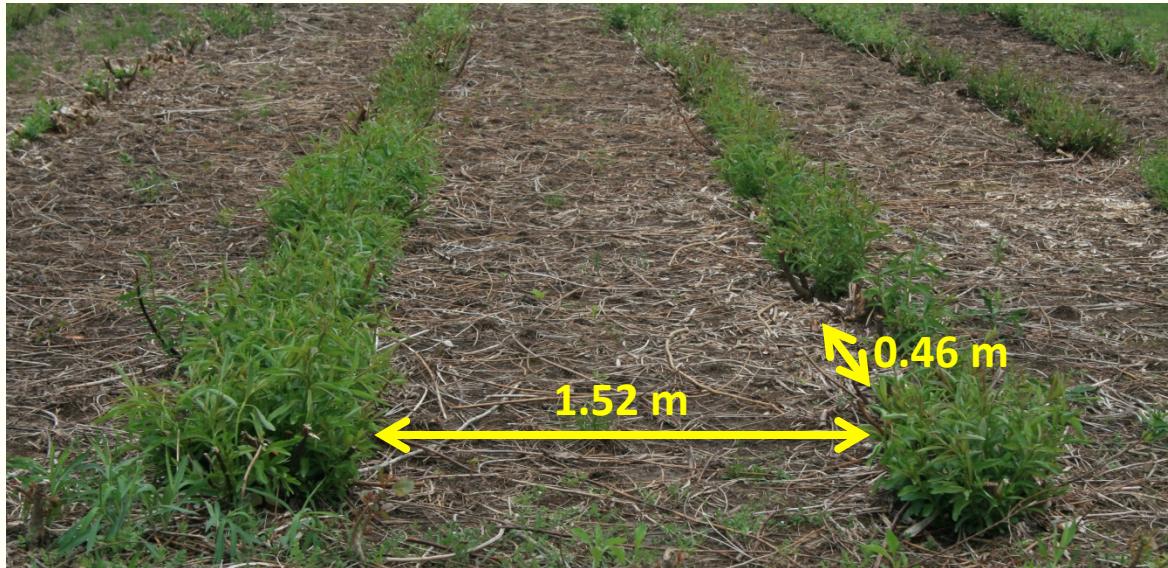

Site Characteristics	Geneva, NY	
	Single Row	Double Row
Latitude	42°52'51"N	
Longitude	77°00'07"W	
Soil Type	Odessa silt loam	
2009 Precipitation (May – August; cm)	31.37	
2010 Precipitation (May – August; cm)	38.82	
2011 Precipitation (May – August; cm)	29.78	
2012 Precipitation (May – August; cm)	21	
2013 Precipitation (May – August; cm)	37.91	
Phosphorus (mg kg ⁻¹)	2.0 ± 0	2.0 ± 0
Potassium (mg kg⁻¹)*	93.25 ± 6.5	81.5 ± 5.78
Magnesium (mg kg⁻¹)*	373 ± 10.78	344 ± 58.59
Calcium (mg kg ⁻¹)	2194 ± 43.57	2148 ± 34.10
Iron (mg kg⁻¹)*	7.07 ± 1.19	9.45 ± 2.79
Aluminum (mg kg ⁻¹)	54.2 ± 8.11	57.1 ± 14.96
Manganese (mg kg ⁻¹)	19.6 ± 1.88	19.4 ± 1.37
Zinc (mg kg⁻¹)*	0.35 ± 0.05	0.43 ± 0.02
Nitrate (mg kg ⁻¹)	0 ± 0	0 ± 0
pH	6.11 ± 0.07	6.06 ± 0.17
Buffer pH	6.01 ± 0.03	6.02 ± 0.08
% Organic Matter	2.875 ± 0.16	2.92 ± 0.26

*Soil characteristics in bold are significantly different by field

2009 Loomis Yield Trial

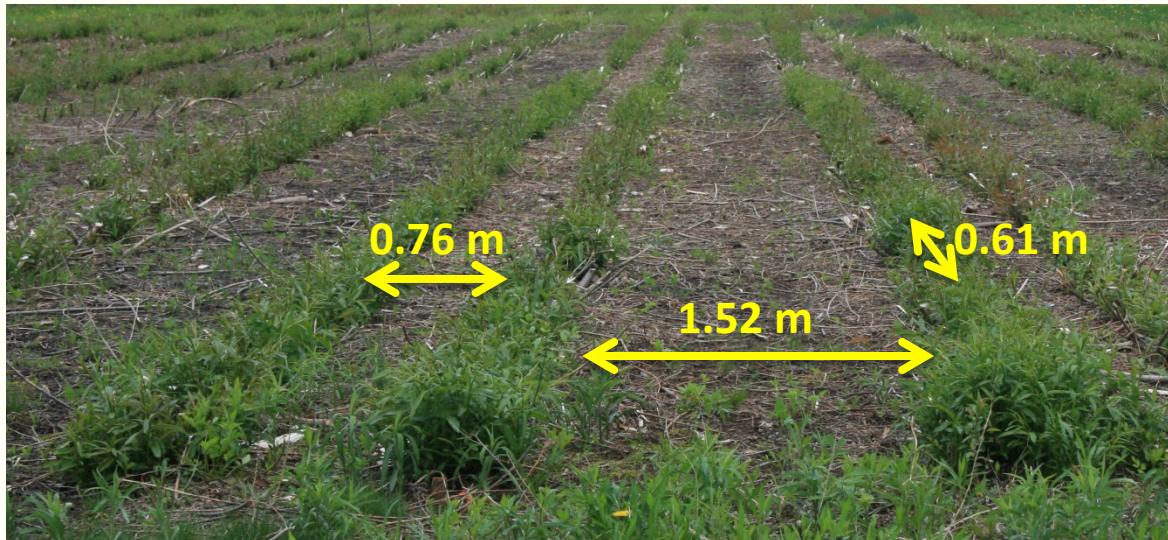

Spacing Design

- **Single Row**
 - 2-year harvest cycle

Equal stand density
14,351 plants per ha

- **Double Row**
 - 4-year harvest cycle

Shrub Willow Genotypes

Cultivar/ Epithet	Species/Pedigree	Nuclear DNA content (pg/ 2C)	Estimated Ploidy
'Boonville'	<i>S. koriyanagi</i> (SH3) × <i>S. purpurea</i> (94001)	1.04	2X
'Fish Creek'	<i>S. purpurea</i> (94006) × <i>S. purpurea</i> (94001)	1.02	2X
'SV1'	<i>S. × dasyclados</i>	0.87	2X
'Terra Nova'	<i>S. × mollissima</i> (LA940140) × <i>S. miyabeana</i> 'Shrubby Willow' (<i>S. schwerinii</i> × <i>S. viminalis</i>) 'Tora' × <i>S. miyabeana</i> 'Shrubby Willow'	1.11	3X
'Nimrod'		1.15	3X
'Sheridan'	<i>S. viminalis</i> (SV2) × (<i>S. viminalis</i> × <i>S. miyabeana</i>) (99207-019)	1.22	3X
LA970253	<i>S. viminalis</i> × <i>S. cordata</i> ?	1.25	3X
'Fabius'	<i>S. viminalis</i> (SV2) × <i>S. miyabeana</i> 'SX67'	1.31	3X
'SX61'	<i>S. miyabeana</i>	1.53	4X
LA980451	<i>S. rehderiana</i> × <i>S. dasyclados</i>	2.05	5X

Results

- Stem Diameter/Area
 - Measured 8 plants per plot
- Stem Height
 - Measured 4 plants per plot
- Wood Density and Composition
- Yield

Final Yield

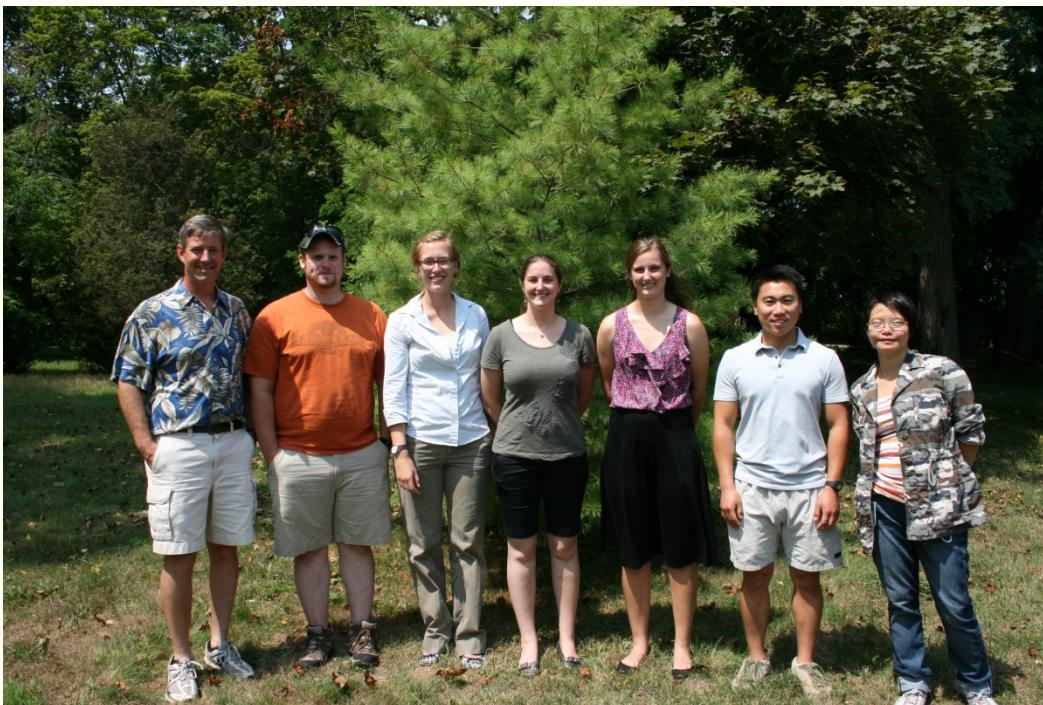

- Mean yield over 4 years
 - Single Row – 11.82 dry Mg ha⁻¹ yr⁻¹
 - Double Row – 9.78 dry Mg ha⁻¹ yr⁻¹
- 20% increase from 1st to 2nd rotation
- Two biennial, single-row harvests 47.3 dry Mg ha⁻¹
- One double row harvest 39.1 dry Mg ha⁻¹
- LA970253 had highest mean annual production

Conclusions

- The total yield of the two biennial, single-row harvests was significantly more productive than a single four-year, double-row harvest
- Triploid hybrid from the UK, LA970253, produced the greatest yield in both trials
- In the single- and double-row trials hemicellulose and cellulose content increased across years, while lignin content decreased.
- The results of this study indicate there are certain cultivars better suited to different cutting cycles
